FULL-STACK DEVELOPER

Biskra, Algeria | +213 667 641 900 | osamachatri@gmail.com | github.com/osamachatri | osamachatri.github.io

PROFESSIONAL SUMMARY

4th-year Systems Security Engineering student who ships production software, not tutorials. Built **ProductivityX**, a 4-client offline-first productivity platform (Android, Desktop, Web, Spring Boot backend) totaling 100K+ lines of code with JWT-rotated authentication, Redis-backed rate limiting, and real-time sync, plus **WellLogAnalyzer**, a Kotlin hydraulics-simulation engine for petroleum engineers. Strong in Kotlin, Java, Spring Boot, and Jetpack Compose, with secure-coding practices applied end-to-end rather than left in a textbook. Open to remote, hybrid, and on-site software engineering opportunities worldwide.

TECHNICAL SKILLS

Languages: Kotlin, Java, Python (Familiar: TypeScript, Go, C++)

Frameworks: Jetpack Compose (Android & Desktop), Spring Boot, Ktor, React, REST & WebSocket APIs

Databases: PostgreSQL, MySQL, Redis, MongoDB, SQLDelight/Room

Security: JWT auth & token rotation, BCrypt, Redis rate limiting, secure coding practices, applied cryptography

Tools & Practices: Git, Docker, CI/CD, Testcontainers, Clean Architecture, offline-first sync design

EXPERIENCE

Software Engineering Intern

Welledge / HDSS — Algiers, Algeria

Apr 2026

On-site

- Contributed to engineering software supporting industrial decision-making, working alongside senior engineers on production codebases
- Observed and applied enterprise practices for architecting, building, and delivering client-facing software in a regulated industrial setting
- Applied network and code security practices and commercial software licensing considerations used in production systems (details limited by NDA)

PROJECTS

ProductivityX --- Offline-First Productivity Platform (Android, Desktop, Web, Backend)

github.com/productivityx-app

- Designed a 4-client ecosystem (Jetpack Compose Android & Desktop, React/TypeScript Web) sharing one Spring Boot 4 / Java 21 backend — 100K+ combined lines of code and 60+ REST endpoints
- Built outbox-pattern offline sync with delta pulls and conflict resolution so every client works fully offline and reconciles silently on reconnect; added WebSocket and SSE streaming for real-time updates and AI chat
- Hardened the API with JWT access/refresh token rotation, BCrypt(12) hashing, SHA-256-hashed token storage, and Redis-backed rate limiting & idempotency

WellLogAnalyzer --- Hydraulics Simulation Desktop App

github.com/osamachatri/WellLogAnalyzer

- Kotlin/Compose Desktop tool for petroleum engineers implementing SPE & API RP 13D hydraulics equations (Bingham Plastic, Power Law, Herschel-Bulkley), built as a technical assessment project (19K LOC, Clean Architecture)
- Depth-step simulation engine, 2D charts and 3D wellbore viewer, and one-click Excel/Word report export

Depan.Go --- Roadside Assistance Platform

github.com/roadside-assistance-platform

Collaborative roadside assistance platform (Android client, provider app, TypeScript backend, admin panel) connecting stranded drivers in remote areas with nearby service providers. Kotlin + Jetpack Compose, built as a team project at ESI SBA.

EDUCATION

ENSTA

École Nationale Supérieure des Technologies Avancées

Engineering degree in Security of Systems — 4th year, 5-year Engineer program

2025 – Present

ESI SBA

École Supérieure d'Informatique Sidi Bel Abbés

Computer Science — First 2 years of engineering program

2023 – 2025

LANGUAGES

Arabic (Native) **English** (Intermediate) **French** (Intermediate)
